2.Project Overview:

✓ **Purpose**

Contact Manager is a platform designed to help users manage, organize, and search their contacts efficiently. The frontend aims to provide a clean, interactive, and responsive interface for adding, editing, deleting, and searching contacts.

✓ **Features:**

- Add, edit, and delete contacts
- Search and filter contacts
- User authentication (login/signup)
- Profile management
- Responsive design (mobile & desktop)

3.Architecture

✓ **Component structure**

- Node.js – Main entry point
- Navbar - Navigation menu
- ContactForm – Add/Edit contact form
- Auth – Login/Register pages
- Profile – User profile and settings

✓ **State Management:**

- Global State: Redux Toolkit (for user data, contacts, authentication)
- Local State: React useState for form inputs and component-level interactions

✓ **Routing:**

- react-router-dom used
- Landing Page
- dashboard → Main contact dashboard
- login → Login page
- profile → User profile

4.Setup Instructions

✓ Prerequisites

- Node.js v18+
- npm

✓ Installation:

- Bash
- Copy code
- Clone repository
- `git clone https://github.com/your-repo/contact-manager.git`
- Navigate to project folder `cd contact-manager/client`
- Install dependencies `npm install`
- Run application `npm start`

5.Folder Structure

- Copy code

```
client/
| ——— public/      # Static files
| ——— src/
|   | ——— assets/   # Images, icons, styles
|   | ——— components/ # Reusable
components (Navbar, ContactForm)
```

6. Running the Application

- Bash
- Copy code
- cd client
- npm start
- The app will run on <http://localhost:5000>

7. Component Documentation

✓ Key Components:

- ContactList: Displays all contacts with search and filter options
- ContactForm: Handles adding and editing contacts
- Navbar: Navigation and logout functionality
- Reusable Components:
 - Button

- Modal
- Card

8.State Management

✓ Global State:

- Managed via Redux Toolkit (user info, contacts list, authentication).

✓ Local State:

- Form inputs, modal visibility, toggle states managed with useState.

9. User Interface

- Dashboard with contact cards/list view
- Add/Edit contact modal forms
- Search bar for filtering contacts
- Mobile-friendly responsive layout
- (Add screenshots or GIFs here)

10. Styling

- CSS Framework: Tailwind CSS
- Icon: Lucide React

- Theming: Dark/Light mode toggle

11. Testing

✓ Strategy:

- Jest + React Testing Library → Unit & integration testing
- Cypress → End-to-end testing

✓ Code Coverage:

- Configured via Jest coverage reports

12. Screenshots / Demo

- Include UI screenshots (Dashboard, Login, Add Contact, Profile)
- Provide link to live demo (if hosted on Vercel/Netlify)

13. Known Issues

- Occasional delay when loading large contact lists
- Minor styling inconsistencies on mobile dark mode

14. Future Enhancements

- Import/export contacts (CSV/Excel)

- Bulk delete and tagging features
- AI-powered contact suggestions
- Real-time sync across devices
